

Oil & Gas Production Management

Enhancing reporting, production tracking, multi-tier allocation and field capture integration. Quickly enter pumper gauge reports and run tickets to calculate production and maintain production history on unlimited properties.

DAILY/MONTHLY PRODUCTION TRACKING

- Monitor/analyze allocated data against daily/monthly production targets
- On-screen calculation of net barrels and run ticket pricing calculations
- Track and report oil, gas, water and other products
- Calculate production and maintain production history on unlimited properties
- Maintain relational database for
 - Properties
 - Fields
 - Crude and gas purchases
 - Gravity scale adjustments
 - Tank strapping
 - Product price indices

REPORTING CAPABILITIES

- Print state reports or create electronic file for upload to reporting agency
- Grid views let you access only relevant data
- Generates daily/monthly graphs for at-a-glance updates
- Compare check stubs entered (barrels, gross, taxes and net) with run tickets to verify order and payment accuracy
- OGOR/ONRR-4054 reporting for federal leases
- Department of Energy Production Report – for oil & gas properties by state and location

MULTI-TIER ALLOCATIONS

- Configure allocation scenarios by days on, percentage, flat amount, volumes, wells or product
- Unlimited commingling with various date-sensitive options
- Import allocation changes

Direct Integration:

WolfePak Production Module interfaces with existing Revenue/Billing.

Direct import capabilities from:

- WP Pumper
- IHS FieldDIRECT
- ogPumper

Additional Capabilities:

Screen calculation of net barrels

Run ticket pricing calculations

Tank-strapping information for volume computation

Run commingled storage tanks or pipeline gathering systems

Generate multiple oil and gas production reports
